About 2Q PGConf

*2ndQuadrant PostgreSQL
Conference*

2Q PGConf is a conference dedicated to exchanging knowledge about the world's most advanced open source database: PostgreSQL

PostgreSQL is a powerful, open source object-relational database system with a proven architecture that has earned it a strong reputation for reliability, data integrity, and correctness. It runs on all major operating systems and is well-equipped for enterprise use.

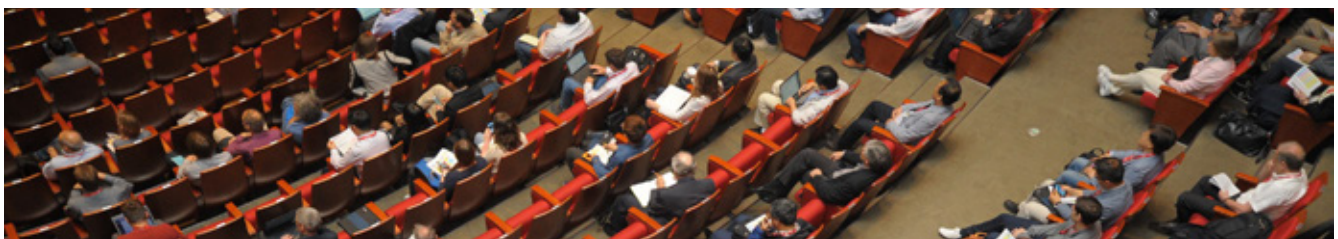

2ndQuadrant was founded in 2001 by Simon Riggs, a major developer and committer of the PostgreSQL project. As the largest single collective organization of PostgreSQL experts of any company globally, 2ndQuadrant has made it their mission to provide the gold standard of products and services to support PostgreSQL and its continuous growth.

The current and future needs to store, access, and manage data can be challenging as the world of technology is constantly evolving and progressing. 2Q PGConf provides a unique opportunity to exchange ideas and learn more about PostgreSQL from world-class experts talking about both recent achievements and the exciting developments coming in the future.

In addition to the world class talks being presented in Chicago - we are also offering training sessions the day before the conference on December 4th.

ABOUT 2ND QUADRANT. 2ndQuadrant provides PostgreSQL Solutions for the Enterprise - reliably deploying them on the platform of your choice and providing 24/7 Production Support. Our solutions address all aspects of your database ecosystem, ensuring high availability, disaster recovery, backup & failover management, and much more.

Moreover, we provide tools to make your deployment process simple and reliable. With over 100 years of combined code contributions to the PostgreSQL project, our engineers ensure that your PostgreSQL solutions are fully supported in your production environment.
